## Notes:

* = between 0 and $\$ 50$ million; PIA = primary insurance amount, NRA = normal retirement age (when retired worker can collect $100 \%$ of PIA), COLA $=$ cost-of-living adjustment.

By convention, most Social Security program statistics are by calendar year. Benefit payments in the federal government's fiscal year (October
through September) roughly track figures for the preceding December. For example, regular benefits in fiscal year 2014 approximately equal recipients
in December 2013 times their average amount, times twelve. COLAs and a rising NRA complicate that relationship, but it remains a useful rule of thumb.
Details may not add to totals because of rounding. A few beneficiaries are not identified by sex.
Outlays reflect benefit costs only and omit other mandatory spending (chiefly the payment to railroad retirement) and discretionary (administrative) costs.
Dually entitled retired workers are insured based on their own past earnings but qualify for a higher benefit on their spouse's or deceased spouse's benefit.
In those cases, Social Security pays the larger amount--technically, a primary benefit plus a reduced secondary benefit. About $98 \%$ of dually entitled retired workers
are women. They are classified as retired workers, but their benefit payments are prorated between the retired-worker and spouse or survivor categories.
