## March 3, 2008

## MEMORANDUM

TO: Interested Parties

FROM: Deborah Kalcevic Justin Humphrey

## SUBJECT: CBO March 2008 Baseline Projections for the Student Loan and Grant Programs.

Attached are nine tables that detail the costs, loan volumes, and subsidy rates for both the guaranteed and direct student loan programs for the March 2008 CBO Baseline as well as a table that details the major federal student grant programs. Below each table is summarized:

Table 1. Includes the cost projection for each budget account associated with the student loan programs--the numbers shown are those in the CBO computer runs for Function 500

Table 2. Includes the loan volume and subsidy rate projections for all guaranteed and direct student loans
Table 3. Includes the loan volume and subsidy rate projections for the guaranteed student loans
Table 4. Includes the loan volume and subsidy rate projection for the direct student loans
Table 5. Includes the detailed components of the federal student loan subsidy rates for fiscal year 2009.

Table 6. Includes the estimates of consolidation loan volume implicit in the estimated subsidy costs of both guaranteed and direct student loans.
Table 7. Includes the Student Aid Administration expenditures.
Table 8. Includes the interest rate forecasts used in the projections of student loan costs
Table 9. Includes the estimates of the Pell, Academic Competitiveness, and SMART grant programs.
For your information, below is a summary of the definitions of budget authority, program obligations, and outlays as they apply to the student loan program subsidy or "program" accounts:

Subsidy Budget Authority: Subsidy budget authority figures express what total subsidy costs would be if all the loans for which an application was received during a year were made. But all loans are seldom made--only about 90 percent. This is because prospective borrowers either do not show up for school or decide not to take the loan

Subsidy Obligations: Subsidy obligations are the costs associated with all loans for which there actually will be at least one cash disbursement [shown on the attached tables as Net Annual Loan Volume]. Typically, the subsidy obligation estimates are not included on budget tables.

Subsidy Outlays: Subsidy outlays reflect the subsidy obligations adjusted for the timing of the loan dollar disbursements. Because of the multiple disbursement requirements and the timing of the academic school year calendars compared to the federal fiscal year, only about two-thirds of the dollars are disbursed to the borrowers during the first fiscal year. The remaining dollars are disbursed in the following year.

a. Totals exclude consolidation loans. Components may not sum to totals due to rounding.
b. The subsidy rate is the net present value of the future federal cash flows associated with the loan dollars disbursed to borrowers each year. For example, the 2008 federal cost associated with the $\$ 69,144$ million in new loan volume
would be - $\$ 118$ million or $17 \%$ of the new loan volume [ $\$ 69,144 *-.0017=-\$ 118]$. In other words, the federal government will save on average less than one cent for each new dollar loaned in 2008 .
c. Subsidy rates were calculated using the CBO March 2008 interest rate forecast.

1./ Due to changes in the economic forecast, subsidy rates are substantially different for years later than 2009.
2./ The loan consolidation fee is included with the special allowance payments because it offsets interest paid to lenders. For Parent and GradPLUS loans that are consolidated, that fee more than offsets the special allowance payments. Rebates to the government when borrower interest rates exceed the lender rates are also included.

*. Note: CBO considers loan consolidation under Section 502(5)(C) of the Federal Credit Reform Act of 1990 to be a repayment choice of borrowers when calculating the loan program subsidies rather than a newly disbursed loan at the time of the consolidation. Thus, the above volume for new annual consolidations are those implicit in our forecast of borrower repayment choices for our baseline subsidy estimates of the original loans. The Department of Education treats consolidation loans as new loans for its subsidy calculation.

a. Because the costs of the student loan programs are estimated on a net present value basis, the interest rate forecast for $2012+$ is the rate which has the most impact on the federal cost of loans disbursed over the forecast period.
b. BER stands for bond equivalency rate
c. The cash flows of the student loan programs are discounted using a matrix of different zero coupon bonds. The rate shown here is the forecast for a $\mathbf{1 0}$-year zero coupon bond for fiscal year 2011. It is shown here for illustrative purposes.

a. Under the CBO March baseline, the obligated level is calculated by inflating the fiscal year 2008 obligation level (which are actual program costs) and budget authority is calculated by inflating the budget authority appropriated for fiscal year 2008. Outlays are based on the obligation level rather than on budget authority
b. The current maximum award level for fiscal year 2008 (academic year 2008-2009) is $\$ 4,241$. The President's budget proposes raising that level to $\$ 4,310$. Funding for the Pell Grant Program and the maximum award level are subject to appropriations.
c. Obligation levels do not include the budget authority necessary to cover the cumulative shortfall.

[^0]:    a. Totals exclude consolidation loans. Components may not sum to totals due to rounding.
    b. The subsidy rate is the net present value of the future federal cash flows associated with the loan dollars disbursed to borrowers each year. For example, the 2008 federal cost associated with the $\$ 54,988$ million in new loan volume would be $\$ 1,721$ million or $3.13 \%$ of the new loan volume [ $\$ 54,988 * .0313=\$ 1,721$ ]. In other words, the federal government will spend on average about 3 cents for each new dollar loaned in 2008 .
    c. Subsidy rates for guaranteed loans do include some federal administrative costs associated with disbursing and collecting loans. Other administrative costs are included on a cash basis in another budget account.
    d. The subsidy rates were calculated using the CBO March 2008 interest rate forecast.

    b. The subsidy rate is the net present value of the future federal cash flows associated with the loan dollars disbursed to borrowers each year. For example, the 2008 federal cost associated with the $\$ 14,156$ million in new loan volume
    would be $-\$ 1,840$ million or $-13 \%$ of the new loan volume $[\$ 14,156 *-.1300=-\$ 1,840]$. In other words, the federal government will save on average about 13 cents for each new dollar loaned in 2008.
    c. The subsidy rates for direct loans do not include most federal administrative costs associated with disbursing and collecting the loans. Those costs are included on a cash basis in another budget account.
