Congressional Budget Office
Cost Estimate

January 8, 2026

H.R. 1834 would authorize an extension through 2028 of the premium tax credit structure provided in the American Rescue Plan Act of 2021 and later extended through calendar year 2025 by the 2022 reconciliation act. The advanceable and refundable premium tax credit reduces out−of-pocket costs for the premiums enrollees pay for health insurance obtained through the marketplaces established by the Affordable Care Act.

Estimated Budgetary Effects of H.R. 1834
As amended by amendment no. 1 and published in the *Congressional Record,* Vol. 171, No. 191 (November 12, 2025, p. H4668)

For this estimate, CBO assumes that the bill will be enacted in January 2026.

CBO estimates that enacting H.R.1834 would increase the number of people with health insurance by 0.1 million in 2026, 3.0 million in 2027, 4.0 million in 2028, and 1.1 million in 2029, relative to current law. The 4.0 million increase in 2028 would result from changes in several types of coverage:

- 6.2 million more people would be enrolled through the health insurance marketplaces established by the Affordable Care Act,
- 0.4 million more people would be enrolled in Medicaid and the Children's Health Insurance Program combined,
- 0.5 million fewer people would purchase nongroup coverage outside the marketplaces, and
- 2.1 million fewer people would have employment-based coverage.

The estimated increase in the number of people with health insurance relative to the number under current law is smaller for 2026 than for 2027 or 2028. That smaller number for 2026 reflects CBO's expectation that people who are shopping for insurance would not see net premiums that incorporate the expanded credit structure before the close of the annual enrollment period for the 2026 plan year (the net premium is the amount of the premium after accounting for the tax credit). However, CBO projects some additional enrollment through existing special enrollment periods over the remainder of the year

CBO also estimates that in 2026, gross premiums for benchmark plans in the marketplaces would be unchanged relative to current law, but that they would be lower by 5.7 percent, 9.0 percent, and 3.3 percent in 2027, 2028, and 2029, respectively, relative to baseline projections. (Gross premiums reflect the amount before a tax credit is applied.) The estimated decline for benchmark premiums arises from the expectation that, on average, the people who enroll in the marketplaces would be healthier than would be the case without the extension. Gross premiums for the 2026 plan year are unchanged in CBO's current estimates because those premiums have already been set for the 2026 plan year.

This estimate reflects CBO's expectation that some effects on enrollment and premiums would persist beyond the availability of the expanded credit.
